TIEKO MEDIA / INFRASTRUCTURE ADVISORY

Lagos Data Centre Requirements Checklist

Capture the facts your team should agree before asking any operator for a quote. Use this as a preparation sheet - not legal, regulatory or engineering advice.

1. Workload and site purpose

- ■ What will run here: production, DR, backup, cloud edge, content delivery or AI?
- ■ Is this a primary site, a secondary site or a migration?
- ■ Do you need retail colocation, a private cage or suite, managed hosting, cloud interconnect, or a mix?

2. Capacity and growth

- ■ How many racks or kW are needed now, at peak, and over the next 3 to 5 years?
- ■ What power density per rack and what expansion space are required?
- ■ Is a cage, private suite or reserved capacity necessary?

3. Resilience and access

- ■ What downtime, RTO and RPO can the business tolerate?
- ■ Who needs physical access, remote hands or equipment-delivery support?
- ■ What customer SLAs or business-critical systems must be protected?

4. Connectivity and location

- ■ Which carriers, IXPs, cloud on-ramps and route diversity are required?
- ■ What latency is acceptable for users and staff?
- ■ How do power quality, flooding, access, security and expansion room affect location choice?

5. Compliance and evidence

- ■ Which sector, data-protection, customer, audit or certification requirements apply?
- ■ What evidence must the operator provide: ISO 27001, PCI DSS, SOC reports or other material?
- ■ Which questions must go to qualified Nigerian counsel or the relevant regulator?

6. Budget and contract

- ■ What must be compared: space, kW, cooling, connectivity, remote hands, set-up and access?
- ■ What billing currency, exchange-rate exposure, contract term and exit flexibility are acceptable?
- ■ Who approves the decision and by when?

Next step: use the completed checklist to frame a vendor comparison around the same criteria. Tieko Media can help turn it into a requirements brief, vendor-question framework and shortlist.
